

KNOW YOUR NEIGHBORHOOD: Worksheet and Guide

ELCA World Hunger
Evangelical Lutheran Church in America
God's work. Our hands.

ELCA World Hunger

God richly provides for our daily bread. Yet many still go hungry. ELCA World Hunger is the ELCA's collective response to hunger and poverty around the world and here in the United States. From health care to microloans, water wells to farms, food pantries to community gardens, the ELCA is committed to creatively and courageously addressing the root causes of hunger and poverty and building a world of justice in which all are fed.

Working through Lutheran churches around the world, congregations in the United States and other partners, ELCA World Hunger is uniquely positioned to reach communities. We start by listening to our neighbors and learning how we can partner together to break the cycle of hunger and poverty. The ministries ELCA World Hunger accompanies are rooted deeply in their local contexts, relying on local strengths to respond to local challenges in ways that the whole church can learn from, engage with and support.

Knowing Your Neighborhood

Data are facts and statistics that help tell the story of your community and your ministry.

Statistics, numbers and other data can help communicate the impact of your ministry, encourage supporters and identify possible areas for growth or change. Data can help you and others know more about the challenges our neighbors face – and the assets that are available in a community. In the following pages, you will find methods you can use to gather the most up-to-date data for your community.

This brief guide will provide some suggestions for finding data related to several areas that impact food security: housing, employment and food access. Each section describes how to find the most reliable data and notes some limitations on the data.

While hunger is the key priority of ELCA World Hunger, we know that ensuring everyone in our community has enough to eat is not just a matter of food. It is also impacted by access to stable housing, sustainable employment and sufficient wages – as well as access to stores or markets that sell nutritious foods.

Two things are worth remembering at the start. First, data are only as good as their sources. The sources used in this guide are reliable and up-to-date. Many sources that can be found online, especially, can present statistics without context or may provide data that does not reflect the most recent information available. Second, numbers work best when they are combined with the more personal knowledge that comes from authentic relationships and listening to neighbors. Together, statistics and stories combine to give a full picture of a community.

What Can You Do With Data

- Learn more about the ways to grow or strengthen an existing ministry;
- Prepare timely, knowledgeable presentations;
- Share information about the context of a ministry with partners, volunteers, donors and other folks;
- Plan for the launch of a new ministry or the growth of an existing one; and
- See and share ways God is at work in the community and world!

Fill in the boxes below, using the data you find. Instructions for each line are included in this guide, starting on page 3.

Name of synod:

Geographic region (for example, state and county, if applicable):

Median monthly housing costs for renters:

Percentage of occupied housing units lacking complete plumbing facilities:

Percentage of occupied housing units lacking complete kitchen facilities:

Percentage of households paying more than 35% of income for housing costs:

Number of people experiencing homelessness:

Number of unaccompanied young people experiencing homelessness:

Average unemployment rate, 2013-2017:

Median household income, 2013-2017:

Mean household income, 2013-2017:

Percentage of households with income below the poverty line, 2013-2017:

Percentage of people experiencing food insecurity:

Number of households receiving SNAP benefits:

Percentage of people eligible for SNAP benefits:

Number of people with low access to a large grocery store or supermarket, 2015:

Number of grocery stores, 2014:

Number of farmers markets, 2016:

Mapping Data

Follow [this link](#) to access a map of your synod. The map will show the range of household income for communities in the synod, as well as the locations of ELCA congregations in the synod. Note: Maps are not available for the Slovak Zion Synod or the Caribbean Synod.

Part I. Housing

Source: American Community Survey (U.S. Census Bureau); Point-in-Time Counts (U.S. Department of Housing and Urban Development)

Information to find: Median renter housing costs and fees, number of homeless individuals (sheltered and unsheltered), number of homeless veterans, change in homelessness rates over time

Why Is This Helpful? Housing costs are one of the factors that most deeply impact the amount of money a household can spend on other needs, including food. Knowing the housing situation in a community can point to the need for services related to affordable housing, safe shelter and the like.

Renter Costs and Fees

1. Visit American FactFinder at factfinder.census.gov.
2. Click on “Guided Search” and then click “Get Me Started.”
3. Select “I am looking for information about housing” and click “Next.”
4. The next screen will allow you to choose from a variety of datasets. For renter costs and fees, click the small + (plus) sign next to “Financial Characteristic.” From the list, select “Renter Housing Costs and Fees.” Then, click on “Next.”
5. The next screen will allow you to choose a geographic type. (You’ll select the region in the next step.) Here, you can choose “State” or “County.”
6. If you select “County,” the next screen will have two drop-down menus. From the “State” menu, select your state. From the “County” menu, select the county you would like information about. After you select the county, click “Add to My Selection.” You can choose more than one county. Click “Next.”
7. The next screen will allow you to choose information specifically about racial or ethnic groups. If you do not need information about a specific racial or ethnic group, click on “Skip This Step.”
8. On this list, you will see a column marked “Dataset.” Under this, some sets of data are listed as “ACS 1-year Estimates” and some are listed as “ACS 5-year Estimates.” The one-year estimates are the clearest and most recent. The five-year estimates are drawn from the results of the previous five years of surveys. For some geographic regions, the one-year estimates are not available.

If you would like information about a specific racial or ethnic group, click “Select from Basic Groups.” More detailed information can be found by clicking on “Select from Detailed Groups,” but this will bring up a list of 820 different groups. The next page will bring up a list of the datasets available to you. Don’t be overwhelmed! Each one is easy to read and presents the data in a clear way.

- Two datasets to look at in the list are “Median Monthly Housing Costs” and “Comparative Housing Characteristics” (five-year estimate). Click on the title to bring up a page with a table of statistics.
- The first set – “Median Monthly Housing Costs” – will show a simple table with the median monthly housing costs for renters in the geographic areas you selected.

Mean vs. Median | “Mean” is the technical term for what is often called the “average.” The “median,” on the other hand, is the middle number in any set. Sometimes, these are the same. But when there are extremes in either direction — for example, one really high number or one really low number — the mean might not give an accurate picture. For example, if five households had monthly costs of \$300, \$400, \$500, \$600, and \$4,500, the mean would be \$1,260, which would suggest the average household costs are higher than they really are. The median, on the other hand, would be \$500, which gives a more accurate picture.

- The “Comparative Housing Characteristics” (five-year estimate) will open a larger table with a number of characteristics. Scroll down to find the heading “Selected Characteristics.” The numbers here will show the percentage of occupied housing units that lack plumbing, kitchen facilities or phone service. The most recent estimate is the percentage in the right-hand column.

TIP In this same table you will find “Selected Monthly Owner Costs as a Percentage of Household Income (SMOCAP).” In this section, you will be able to see what percentage of people in the geographic region you selected pay a certain percent of their monthly income for housing, both with and without a mortgage. The highest percentage listed — “35.0 percent or more” — is especially concerning. This means that the household is spending more than a third of its monthly income for the costs included (utilities and either rent or mortgage).

Homelessness

- Visit the U.S. Department of Housing and Urban Development’s information hub at hudexchange.info.
- Click on “Resources” near the top of the page. The resource you are looking for is called “PIT Estimates of Homelessness in the U.S.” Sometimes, this is listed as a featured resource at the top of the page. You can also search for it on this page. Be sure you select the most current year. (This will be the year prior to the current year; new estimates are released at the end of each calendar year.)

PIT stands for “point-in-time.” The PIT is a count of sheltered and unsheltered homeless people on a single night in January. This carefully coordinated count provides a reliable estimate of homelessness throughout the U.S. The PIT count of unsheltered homeless persons happens every other year, while the count of sheltered homeless persons happens annually.

3. From the list on the next page, click on “Point-in-Time Estimates by State.” This typically has a range of years in the title. The link will open an Excel spreadsheet.
4. If you opened a multiyear report, the spreadsheet will have a series of tabs at the bottom, one for each year and one additional tab for changes over time. Select the most current year for up-to-date estimates. Select the “changes” tab to see how the number of individuals experiencing homelessness has changed over time.

5. The numbers in the spreadsheet will tell you how many people in each state were homeless during the point-in-time counts.

There are a few acronyms in the table that can be confusing:

Sheltered ES Homeless — Emergency Shelter. These facilities accept guests experiencing homelessness for short periods of time, often from one to seven nights.

Sheltered TH Homeless — Transitional Housing. These facilities provide guests with stable and sufficient housing and support to help them progress toward permanent housing.

Sheltered SH Homeless — Safe Haven. These facilities provide safe housing and support for people with severe mental illness, who may not have access to other support services.

6. HUD also collects data specifically on homelessness among U.S. military veterans. To access this report, follow steps one and two above. On the page listing the available reports, click on “PIT Estimate of Veteran Homelessness in the U.S.”
7. On the following page, you will be able to select an Excel spreadsheet estimating veteran homelessness either by state or by “CoC” (Continuum of Care – programs supported by HUD).

TIP

To share this data with others in a presentation or publication, use this format: “On a given night in January [year], x number of people in our state experienced homelessness.” This is the most accurate way to describe the data from point-in-time counts.

Part II. Employment

Source: American Community Survey (U.S. Census Bureau); Current Population Survey (U.S. Census Bureau and U.S. Bureau of Labor Statistics)

Information to find: Unemployment rate, rate of individuals and families below the poverty line, household income

Why Is This Important? One of the biggest causes of hunger is poverty, and one of the reasons many people face poverty is lack of stable, sufficient employment. The data here can help give you a picture of employment in your area. The information may also point to the need for more programs that help people find stable and sufficient employment.

1. Visit American FactFinder at factfinder.census.gov. (After July 2019, this website will be renamed data.census.gov.)
2. Click on “Guided Search” and then click “Get Me Started.”
3. Select “I’m looking for information about people.” Click “Next.”
4. From the menu, click the small + sign next to “Income & Earnings.” From the choices, click on “Income/Earnings (Households).” Click “Next.”
5. The next screen will allow you to choose a geographic type. (You’ll select the region in the next step.) Here, you can choose “State” or “County.”
6. If you select “County,” the next screen will have two drop-down menus. From the “State” menu, select your state. From the “County” menu, select the county you would like information about. After you select the county, click “Add to My Selection.” You can choose more than one county. Click “Next.”
7. The next screen will allow you to choose information specifically about racial or ethnic groups. If you do not need information about a specific racial or ethnic group, click on “Skip This Step.”
8. The next page will bring up a list of the datasets available to you. Don’t be overwhelmed! Each one is easy to read and presents the data in a clear way.
9. From the datasets, select the first listing of “Selected Economic Characteristics.” Choose “1-Year Estimate.” NOTE: Not all counties will have this level of data available. For these, choose “5-Year Estimate.” When sharing this information, be sure to be clear that the numbers are an estimated average over the five years.
10. In the table that appears, you will be able to find the unemployment rate, median and mean household income, statistics on health care coverage, and statistics related to households with income below the poverty line.
11. To view a comparison of earnings by sex, click on “Topics” at the top of the page listing the datasets. Click the small + sign next to “Age & Sex” and then select “Sex.” Click “Next.”
12. On the “Geographies” page, select “United States” and “Add to My Selections.” (These comparative tables are not available at the county level.)

If you would like information about a specific racial or ethnic group, click “Select from Basic Groups.” More detailed information can be found by clicking on “Select from Detailed Groups,” but this will bring up a list of 820 different groups. The next page will bring up a list of the datasets available to you. Don’t be overwhelmed! Each one is easy to read and presents the data in a clear way.

13. When the list of datasets appears, click on “Media Earnings in the Past 12 Months (in 2009 Inflation-Adjusted Dollars) of Workers by Sex and Women’s Earnings as a Percentage of Men’s Earnings by Selected Characteristics.” The “1-Year Estimate” is the most up-to-date.

14. The table that appears compares earnings between men and women according to a variety of characteristics (age, education, industry, etc.). The column on the far right provides the average percentage of women’s earnings relative to men’s, given the factor listed for the row.

Part III. Food Security

Source: United States Department of Agriculture (USDA); Feeding America’s “Map the Meal Gap”

Information to find: Food security rate for the U.S.; child food security rate

Each year, the USDA releases its household food security report. Feeding America uses USDA data and other research to compile the data in its “Map the Meal Gap” resource, which is updated less frequently. Feeding America’s research tool allows users to explore food security rates at state and county levels.

Food Security in the U.S. – Nation and State

1. Visit <https://www.ers.usda.gov/topics/food-nutrition-assistance/food-security-in-the-us/>.
2. On the left side of the screen, click on “Key Statistics & Graphs.” The next page will have several sections with data on different areas of food security. There are also links to better understand the definitions of terms, the history of the USDA’s report and the methodology used in the research.
3. To find the rate of food security for a specific state, scroll to the bottom of the “Key Statistics & Graphs” page. There is a link there to the “Household Food Security in the United States in 20xx” report. (A link to this report can also be found at the webpage listed above.)
4. Click the link to the full report to open it. In the 2017 report, Table 4 lists food security rates by state.

The full report, “Household Food Security in the United States in 20xx,” can be accessed through a link near the top of this page. The report for each year is released the following fall, so the 2017 report is the most recent report available; the 2018 report will be released in Fall 2019.

Child Food Security — Child food security is very difficult to measure. The USDA relies on surveys of households and reports child food insecurity according to the number of children in households where food insecurity was experienced by one or more members. Often, adults will go without food so that children can eat, or older children will go without food so that younger children can eat. In this case, while the “household” experiences food insecurity, technically one or more children may not. So, when sharing this information, specify that the number or percentage represents “the number (or rate) of children living in food-insecure households.”

State and County Food Insecurity

1. Visit Feeding America's "Map the Meal Gap" at map.feedingamerica.org.
2. There are two ways to access data about counties. To search, use the search bar near the top of the page. Enter the name of the county and the state to search. To use the map tool, select your state from the list under "Location." The map will zoom in to the state. Click on the appropriate county to bring up the number of people who are food insecure and the rate of food insecurity.
3. Note: The numbers listed for eligibility for SNAP and other nutrition programs do NOT reflect actual participation in the programs.

Part IV. Food Access

Source: United States Department of Agriculture – Economic Research Service

Information to Find: Number of stores and restaurants at the county level; access to supermarkets

Why It Matters: Limited access to food is one of the primary causes of hunger. Even if people have money for food, without access to suppliers such as local farmers or grocery stores, they may not be able to purchase fresh, nutritious food.

For all the statistics below, follow these two steps first:

1. Visit the USDA's "Food Environment Atlas" at <https://www.ers.usda.gov/data-products/food-environment-atlas/>. Click on "Enter the Map."
2. The first map that appears is a county-level map of the number of fast-food restaurants. To select another map, click on "Select Map to Display."

Each map color-codes counties. The legend is at the bottom-right corner of the page.

Number of People With Low Access to Grocery Stores

1. Follow steps 1 and 2 in the box above.
2. To find the number of people with low access to large grocery stores or supermarkets, click the small arrow next to "Access and Proximity to Grocery Stores."
3. Select "Population, low access to store, 2015." The colors will indicate the number of people with low access.

"Low access" is defined as living more than one mile from a large grocery store or supermarket, if living in an urban area, or living ten miles or more from a large grocery store or supermarket, if living in a rural area.

Number of Grocery Stores (County)

1. Follow steps 1 and 2 in the box above.
2. Click on the small arrow next to “Store Availability.”
3. Select the map titled “Grocery stores, 2014.” This will provide a color-coded map that indicates the number of grocery stores available in a given county.
4. Click on “Select Map to Display” to open the list of maps.

Access to Local Foods (County)

1. Follow steps 1 and 2 in the box above.
2. Click on the small arrow next to “Local Foods” in the list of maps.
3. From this list, you can select maps that detail the volume of direct sales from local farms, the number of farms in a county and the number of farmers markets in a county.

Part V. Community Asset Mapping

Community asset mapping is a technique for identifying the assets within a community that can be leveraged as part of a local solution to challenges such as hunger and poverty. This kind of mapping takes a bit of time, but it is an important way to identify a community’s strengths rather than just its challenges.

The Center for Community Health and Development at the University of Kansas has a great overview of community asset mapping and a useful tool for making your own map. You can learn more at <https://ctb.ku.edu/en/table-of-contents/assessment/assessing-community-needs-and-resources/identify-community-assets/main>.

Another helpful tool is the “Tune-in Guide” available from LEAD, a coaching and consulting ministry that works with congregations. The “Tune-in Guide,” which is part of a larger process of congregational transformation, guides participants through a process of listening deeply and authentically within their congregations and communities to identify strengths, challenges and areas for growth. The “Tune-in Guide” and other resources can be accessed at waytolead.org.

Sample Report: Macomb County, Michigan – Southeast Michigan Synod

- Median monthly housing costs for renters in Macomb County – **\$947**
- Occupied housing units lacking complete plumbing facilities – **0.3%**
- Occupied housing units lacking complete kitchen facilities – **0.8%**
- More than **10%** of nonmortgaged households pay more than 35% of their income for housing.
- On a given night in January 2018, **8,351** people in Michigan experienced homelessness. This included **604** unaccompanied young people under the age of 25.
- From 2013 through 2017, Macomb County had an average unemployment rate of **6.6%**. The median household income was **\$58,175**, and the mean household income was **\$73,932**.
- **43,143** households received SNAP benefits in the past 12 months.
- **11.8%** of residents were living in poverty each year, on average.
- **13.6%** of Michigan residents experienced food insecurity in 2017.
- **12.1%** of people in Macomb County experienced food insecurity in 2017, slightly below the state average.
- **65%** of food-insecure people in Macomb County were eligible for SNAP or other public benefits.
- More than **50,000** people in Macomb County had low access to a large grocery store or supermarket in 2015. This is despite the fact that the county had 134 grocery stores in 2014.
- Between 2009 and 2016, the number of farmers markets providing access to fresh food grew more than **50%** in Macomb County. In 2016, the USDA counted seven farmers markets in operation across the county.
